Project EDA atlas · acquisition and readiness · 27 September 2026

01 A large dated inventory narrows at the text stage

Independent parents or EU Works; points show three documented acquisition stages.

Separate pilot inventory

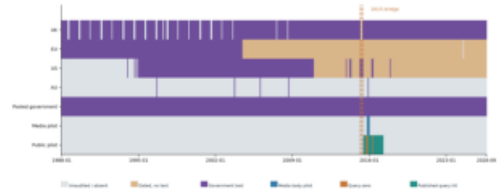

Guardian Dec 2021: 396 candidate article URLs · current archive; four body checks

Petition q=climate: 177 distinct submitted IDs · 77 published, 100 rejected

Source-specific checkpoints on 27 Sep 2026 UTC. Guardian URLs and petition IDs are separate pilot units; no cross-source total.

02 Government text touches every study month

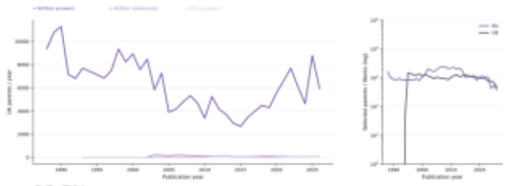

441 monthly bins, January 1986–September 2026; pilot channels remain partial.

Presence of dated text, not climate relevance. September 2026 is partial; grey is unqualified or absent, not verified zero.

03 UK written answers dominate the annual record

Annual dated independent parents / EU Works; separated scales retain source identity.

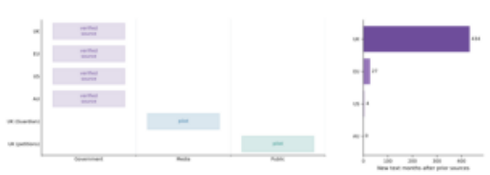

98.5% of dated UK parents are written answers

Source regime and retrieval depth differ; heights are inventory counts, not comparable expression rates.

UK counts from read-only DB, 2026 from 13:03 UTC ledger; US 119 bridge originals added to readable status only. 2026 is partial.

04 The pooled timeline has an uneven issuer footprint

Matrix marks documented source roles; incremental months measure contribution to government text coverage.

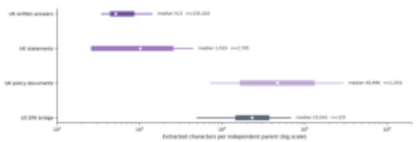

Locator: UK-state institutions · EU Commission (supranational) · US federal agencies · verified AU originals.

Issue/governance scope is not the location of affected people. Ukraine Guardian and petition pilots have no population-coverage claim.

05 Text length is sharply genre dependent

Parent-level extracted characters; horizontal whiskers show P10–P90, thick bar P25–P75, point median.

Format audit: UK extraction shape

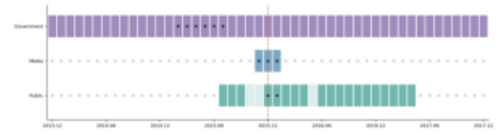

UK webpage	UK PDF	UK CSV	UK other
1,929/1,929 objects	1,362/1,375 objects	23/23 objects	591/608 objects
median block 18 chars	median block 38 chars	median block 270 chars	median block 114 chars

UK status: OCR needed 14 · unsupported 5 · extraction failed 3 objects
EU status: OCR review 200 · scan OCR pending 29 staged items

UK internal quality snapshot. UK DTA bridge 119 parents. PDF segments are layout blocks, not independent documents or semantic units.

06 Paris is a source-feasibility window, not a panel yet

49 months centered on December 2021; each glyph records the highest verified evidence stage for that role-month.

49/49 government months with stored text

Guardian Dec. 396 dated candidate URLs; 4 checked current bodies. Published petition q=climate opened: Nov 3 – Dec 8 · Jan 5.

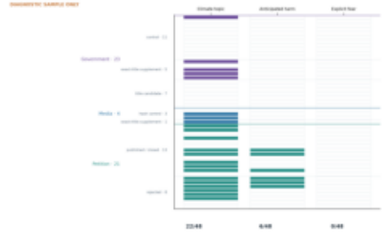

Diamond = diagnostic parent review in month; pale cell = dated query result without positive published hit; cross = unqualified.

Dated = readable · reviewed climate topic · denominator-ready. No complete monthly three-role climate or fear measure is established.

07 Reviewed parents cover topic and risk; fear remains a later interpretation

All deliberately selected diagnostic parents: 23 government, 6 media, 21 petition.

DIAGNOSTIC SAMPLE ONLY

Filled cell = manual parent-level present. Counts are not status prevalence and absent fear labels cannot exclude a source.

08 Traceable links stop before attribution

Three real pilot parents show observed provenance and the next passage-level interpretation step.

Version / field IDs and complete parent IDs are rehearsed in figure_08_traceability.csv. Guardian body text is not reproduced.

Verb = source-supported relation; dashed/missing = proposed review. No causal link is inferred from shared date or topic.
