

02 Content objects and versions are not parent records

Distinct objects and saved content versions per 100 source-frame parents, candidates or Works; baseline = 100.

UK source pages can hold many written-answer parents; DEFRA papers can have multiple attachments.

US/EU gaps between parents and versions reflect saved-body depth. AU candidate counts are not verified original works.

Separate extraction scale: 1,362 UK PDF objects generated 2,745,617 line/block segments (median 38 characters per segment).

Segments and shared objects are not additive parent counts; linked objects may appear in more than one parent or month.

Source data: unit_and_duplicate_diagnostics.csv; 21 Sep 2026 UK format summary. Source checkpoints are not synchronized.
